

## Support

We are fortunate to receive funding from the National Institutes of Health, including the National Institute on Deafness and Communicative Disorders and the National Institute of Child Health and Development, as well as from the James S. McDonnell Foundation.

We are also grateful for the support from the many individuals who have made generous donations to the Eleanor M. Saffran Center for Cognitive Neuroscience through the College of Health Professions. Director of Development, Ashley Lomery, email: ashley.lomery@temple.edu

## Mission Statement

Dr. Eleanor M. Saffran was one of the pioneers of Cognitive Neuropsychology with a career spanning some 35 years. Dr. Saffran spelled out the methodological tenets of "cognitive neuropsychology" exemplified in her studies of aphasia, acquired dyslexia, word deafness, and short-term memory impairment. These seminal papers are among the

most widely cited in the field today. In 1980, Dr. Saffran established the Center for Cognitive Neuroscience. Here she built an interdisciplinary research group composed of neurologists, psychologists, and speech pathologists. Under her leadership, this group extended the cognitive neuropsychological approach to the analysis of neurological disorders of perception, visual attention, and semantics. As the field of cognitive neuropsychology matured, Dr. Saffran became recognized as one of its most influential practitioners. Dr. Saffran was an exemplary scholar, leaving an extraordinary legacy of contributions to the field of cognitive neuropsychology. She will always be remembered for these accomplishments, but also for her kindness and generosity to colleagues, friends, and students.

In the spirit of Dr. Saffran's legacy, the Eleanor M. Saffran Center for Cognitive Neuroscience provides a venue for interdisciplinary research in the neural and psychological basis of language and cognition. Our aim is to understand and explore the relationship between language and other cognitive processes, such as attention and memory. These findings are used to develop effective treatment programs for the rehabilitation of language disorders. Thus, fulfilling the mission inspired by Dr. Saffran.

## Eleanor M. Saffran Center for Cognitive Neuroscience

### Aphasia Research Laboratory Dr. Nadine Martin, Director

Researchers, clinicians and students work together to investigate the relationships among language, short-term memory, and learning changes that typically result from stroke and progressive neurological disorders. Understanding these relationships helps us to develop the most effective treatments for language and memory disorders.

### Cognitive Neurophysiology Laboratory

#### Gerry A. Stefanatos, D. Phil., Director

Research in the Cognitive Neurophysiology Laboratory focuses on studies of the efficacy of behavioral and psychopharmacologic treatments in disorders of language, spatial cognition, and attention. This research integrates neuropsychological, neurophysiological and functional imaging techniques to understand brain plasticity and the neural changes that accompany recovery and learning in the above listed disorders.

Dr. Nadine Martin observes as Research Speech Language Pathologist Francine Kohen tests a stroke patient's vocabulary comprehension.

## Frequently Asked Questions

**Who is eligible to participate in the research and treatment programs?**

People with acquired brain injury, including stroke, dementia or traumatic brain injury, are eligible to participate in our research and treatment programs.

**What is involved if I decide to participate?**

I will be given tests to evaluate my language and memory abilities. I may also be given the opportunity to participate in experimental treatment programs.

**Why should I participate?**

You will gain a better understanding of your language and memory abilities by participating in our research programs. If you are eligible to participate in one of our treatment programs you may benefit from a genuine improvement in your communication abilities. You will also help us understand more about the language impairments that result from brain damage so that we may continue to develop more effective treatments for future participants.

**If I want to participate, who should I contact?**

If you would like additional information or would like to participate in our research and treatment programs please contact Francine Kohen at (215) 204-4752, email: [fpkohen@temple.edu](mailto:fpkohen@temple.edu), or Michelene Kalinyak-Fliszar at (215)204-2183, email: [michelene.kalinyak-fliszar@temple.edu](mailto:michelene.kalinyak-fliszar@temple.edu).

**How is confidentiality ensured?**

We are dedicated to protecting and maintaining privacy and confidentiality of people who participate in our research and treatment programs. All information pertaining to our research will be kept confidential in accordance with all applicable federal, state, and local laws and regulations. Only members of the research team have access to personal identifying information.
